

START-UP & COMMISSIONING

MINIMIZE ANY CHANCE FOR COSTLY SETBACKS BY HAVING A CHROMALOX QUALIFIED PERSONNEL FOR ON-SITE START-UP AND COMMISSIONING ANYWHERE IN THE WORLD.

Ask about additional levels of service, such as Chromalox Service Performance Contracts and Cold Weather Contracts. Chromalox Service & Support will help ensure optimum process performance throughout the product lifecycle.

Our engineers have been comprehensively trained and possess the required process know-how. They are available to commission the mechanical, electrical, instrumentation and control equipment for any system we have built. Chromalox technicians will assist with initial equipment start-up and perform a complete review of the installed system to ensure optimized integration into your facility. You can trust Chromalox to get your processes up and running.

Start-up & Commissioning includes but is not limited to:

- Accelerated Lead Times, Value Optimized Pricing and Fast Quote Turnaround
- Verification that the equipment supplied matches factory documentation.
- Confirmation that the heater is suitable for area classification.
- Perform meg-ohm and resistance change on each circuit.
- Check sensor connections, wiring and terminal type.
- Confirmation that the supply voltage matches equipment specification.
- Review that the power line sizing is sufficient for amperage.
- Verification of proper installation and start up.
- Observe equipment during start-up for proper operation with customer process. (if available)
- Review integrity of conduit connections and/or gland plates.
- Review controller programming and settings with site personnel.
- Review operating instructions with site personnel.

* For complete details by product type, please refer to the statement of work.
